Take hold of the shelf with both hands (it's easier if you hold the shelf by its shorter sides), tilt the shelf to an angle of 45 degrees and press then back edge on the back plate (image 1) and then level the shelf to fully connect the shelf (image 2). Finally, level the shelf to the desired final position (image 3 & 4)

You will notice that when handling the shelves correctly, you will not have to use much force to move them around the back plate.

Please handle the shelves as instructed to avoid hurting your fingers, scratching the back plate or even shattering the magnets.
