

The Q-COUCH is made from ARPRO (Expanded Polypropylene), a wonderful new foam material that helps make furnishings more convenient and enjoyable.

ARPRO is incredibly light weight for all the strength it provides. Now your furnishings don't have to be so difficult to move around.

**Assembly:**

It can't be easier. Just press the single Q-COUCH sections together. You do not need to use any tools for assembly or disassembly.

When you move it about the Q-COUCH will not scratch even the finest hardwood floors or damage walls if you happen to bump them.

**Cleaning:**

Like water off a duck's back, ARPRO material fends off dirt, spills, stains of all sorts. Just wipe with damp cloth. It couldn't be easier. If you are really serious about cleanliness, in fact, you can sterilise the Q-COUCH with steam. Avoid abrasive cleaning agents.

Importantly, ARPRO is so environmentally friendly that it is actually approved for food contact. It is completely odorless, emission-free, and is 100% recyclable.

You can use the Q-COUCH outdoor but it is not recommended for continuous exposure to UV light, due to the nature of it's polymer it's made from. After exposure of weeks or months to direct sunlight there may be a change in the apparent colour of the furniture and perhaps some slight chalking. As the Q-COUCH is so light and easy to move we suggest that you remove it from direct sunlight (outside) when not in use.

**Avoid:**

- jumping or climbing on the product
- contact with sharp objects
- placing hot objects on the product

BOX15 is not responsible for damage caused by anything or anyone who does not follow the correct use of the product.
